## 62-Year-Old Female Patient

**Tumor Type:** Adenocarcinoma

**Tumor Stage:** Stage III A/B (N1-3)

**Histologic Grade:** Low (1)

**Lymph Node Status:** Positive

**Number of Lymph Nodes Assessed:** 10

**Mismatch Repair (MMR) Status:** N/A

**Lymphovascular Invasion:** Present

**Perforation:** Absent

**Obstruction:** Absent

**Other Information:** Treatment: Patient received 5-FU without Oxaliplatin

## CLINICAL EXPERIENCE

Recurrence Score = **12**

### Prognosis for Stage III A/B Colon Cancer Patients Following Adjuvant Chemotherapy

The clinical validation study included patients from the NSAPB C-07 trial which randomized 409 stage III A/B patients to 5FU/LV versus 5FU/LV+oxaliplatin.<sup>1</sup>

The average 5 year risk of recurrence for patients who had a Recurrence Score<sup>®</sup> result of 12 was:

Other Considerations: The recurrence risk for patients with  $\geq 12$  nodes examined was lower than the risk for those with  $< 12$  nodes examined.
