

Colon Case Study

oncotype DX[®]
Colon Cancer Assay

72-Year-Old Female Patient

Tumor Type: Adenocarcinoma

Tumor Stage: Stage II: T3 (N0)

Histologic Grade: Low (1)

Lymph Node Status: Negative

Number of Lymph Nodes Assessed: 46

Mismatch Repair (MMR) Status: MMR-P (MSS)

Lymphovascular Involvement: None

Perforation: N/A

Obstruction: None

Other Patient Information: Patient had venous hypertension as well as degenerative joint disease and multiple lower back problems and disk degeneration. Offered patient surveillance and no chemotherapy treatment.

Colon Case Study

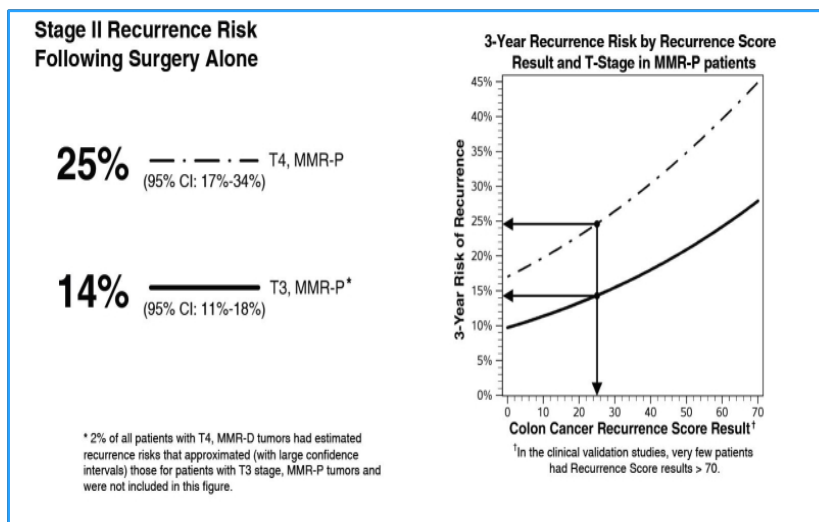

CLINICAL EXPERIENCE

Recurrence 25

Prognosis for Stage II MMR-P Colon Cancer Patients Following Surgery Alone

The clinical validation study included stage II colon cancer patients from the surgery-alone arm of the QUASAR study (N=711)¹ and a pre-specified analysis of the Recurrence Score result, in the context of T-stage and MMR status.

The average 3 year risk of recurrence for patients who had a Recurrence Score result of 25 was:

Impact of Nodes Assessed: For patients with ≥ 12 nodes examined the 3-year recurrence risk was lower than that shown in the Figure. For T3 MMR-P patients the reduction in risk ranged from 2% for low to 6% for high Recurrence Score results. For T4 MMR-P patients the reduction in risk ranged from 4% to 10% respectively. For all MMR-P patients with < 12 nodes examined, the recurrence risk was 2-3% higher.

Colon Case Study

CLINICAL EXPERIENCE

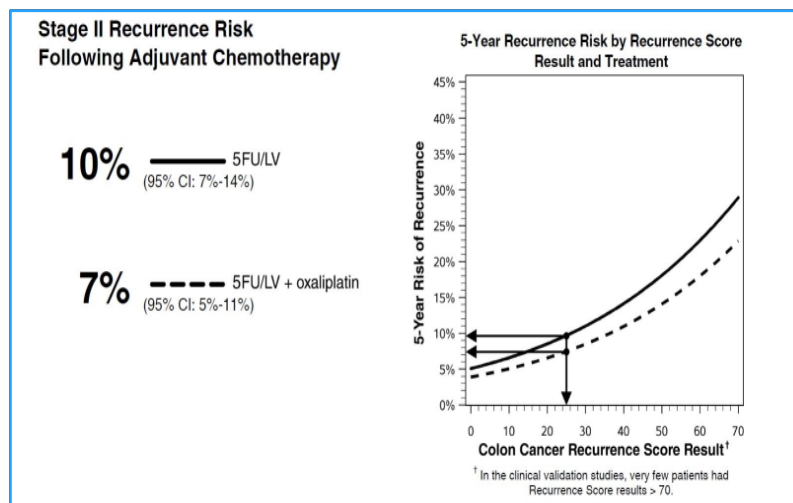

Recurrence 25

Prognosis for Stage II MMR-P Colon Cancer Patients Following Adjuvant Chemotherapy

The clinical validation study included patients from the NSABP C-07 trial which randomized patients to 5FU/LV versus 5FU/LV+oxaliplatin; 264 patients were stage II, including 247 (94%) with T3 tumors. Of 213 patients with available MMR status, 82% were MMR-P.²

The average 5 year risk of recurrence for patients who had a Recurrence Score result of 25 was:

Impact of Nodes Assessed: The recurrence risk for patients with ≥ 12 nodes examined was lower than the risk for those with < 12 nodes examined.
